FO-CAP

Ash Pan for the Chameleon2, Onyx2 and Topaz Fireplaces

WOODBURNING FIREPLACES

The ash pan is available only for the classic face Chameleon2 fireplace, only for the Louvered Onyx2 fireplace and for the Topaz fireplace. The ash pan provides a convenient way of disposing of the fireplace ashes. Simply remove the plug from the firebox and sweep the ashes through the hole into the ash pan. When the ash pan is full, simply remove the ash pan through the bottom louver opening and dispose of the ashes safely.

INSTALLATION

The ash pan goes under the firebox behind the bottom louver.

1. For a Cameleon2 or a Topaz, remove the bottom louver completely and put it aside. For an Onyx2, open the bottom louver completely.

2. Remove the round central firebrick. This firebrick is not required with the ash pan.

3. Remove the nut and bolt on the central plug of the firebox. The nut is a locknut so you will need to hold it tightly to unscrew the bolt. Remove the top and bottom plates, the nut and the bolt. These are no longer required.

4. Slide the ash pan support (13.CAP.07.C) onto the two guides underneath the firebox (see **Figure 1**).

5. Using the self-tapping screw provided, attach the ash pan support to the ash pan guide by screwing through the pre-punched hole at the back of the ash pan support (see **Figure 1**).

6. Slide the ash pan (1.13.CAP.02.C) onto the ash pan support.

7. Put the ash pan plug (1.13.#AP.01.CP) in the hole of the firebox

8. For a Cameleon2 or a Topaz, reinstall the bottom louver. For an Onyx2, close the bottom louver.

You are ready to use the fireplace with the ash pan.

❖ **WARNING: MAKE SURE TO ALWAYS HAVE YOUR ASH PAN AND ASH PAN PLUG IN PLACE BEFORE LIGHTING A FIRE.**
